

Insulation

When your home is well insulated, it's warmer in Winter and cooler in Summer and drier all year round.

You can rely less on energy guzzling heat systems and enjoy lower power bills—music to your ears if you're an average New Zealand household spending 35% of your total energy requirements just to warm your home.

Research proves that health issues amongst children and adults are significantly reduced in a well insulated home—meaning fewer sick days. A warmer, drier home equals more cash in your wallet and a healthy family—its got to be a good thing!

The real driver for installing insulation is energy efficiency. The investment soon pays for itself. All insulation is installed according to EECA's Quality & Audit Manual. Each job is audited and signed off. You can rest assured your Kensair insulation solution will be 100% correct.

- *Subsidy funds 33%—up to \$1300!*
- *Quality installs—each job audited for your peace of mind.*

How it all works

Funding, insulation & energy efficiency

Kensair are pleased to be funding a 33% subsidy (up to \$1300!) towards the cost of your home insulation. Thousands of kiwi's have already taken advantage of this great programme—it's time you did too!

Assessment

Firstly one of our consultants assesses your existing insulation as per the subsidy requirements, then measures your home. A detailed recommendation is then provided.

Installation

The installers are the guys who perform the magic. They crawl around under low houses, often with damp soil, in ceilings and sometimes sharing the space with interesting creatures! These guys do it, and smile all week long.

Install time

Most homes take around 5 hours to complete. Underfloor product is stapled up into the floor joists. In the ceiling we use blanket product, white effectively seals the warmth in, but in Summer keeps the heat out, and doesn't cost a bean to run, what more could you ask for?

- *Trustworthy staff—it's your home and you can trust our people in it.*
- *Service—from quote to completion, we'll make sure you're kept in the loop and communicated with. We make sure our staff are on time and behave in a professional manner.*
- *We clean up!—Yes, that's right, before we go we vacuum the areas we've been working in and make sure everything is left spic and span.*

Comfortmaker

HOME VENTILATION SYSTEM

Our Comfortmaker will give your home the capacity to be its warmest through Winter, coolest in Summer and more comfortable for you and your family—whatever the season.

Life inside today's airtight homes generates both moisture and pollutants. The moisture comes from cooking, washing, showers and breathing.

At excessive levels, moisture condenses on windows and can cause structural deterioration. Areas of excessive moisture are also a breeding ground for mould, mildew, fungi, just mites and bacteria.

You know you have a problem if you find moisture collecting on your windows, or if you notice black spots on your walls. These unsightly spots indicate mildew growth. Mould spores and dust easily become airborne and circulate freely throughout the house and can cause a range of illnesses and allergic reactions.

The comfortmaker will manage excess levels of moisture and maintain optimum relative humidity throughout your home.

The superior deep pleat (F6) Grade filter will remove harmful dust and allergens before delivering a continuous flow of fresh, clean air for you and your family to breathe.

Heat pump or wood burner?

Or perhaps both?

We have a large range of leading brand heat pumps.

At Kensair we have years of experience in the industry. We don't just fit the easiest heat pump we can—we customise a tailor made solution for your exact situation.
